Summary

I'm Muhammad Hassan Ali, a 3D Web Developer with over 6 years of experience creating interactive 3D websites, product configurators, and immersive web experiences. I specialize in PlayCanvas, Three.js, and WebGL, building real-time 3D interfaces seamlessly integrated with custom backends. My work focuses on delivering visually engaging, high-performance solutions for clients across Pakistan and Europe.

Experience

Freelance — Software Engineer

Aug 2020 – Present

- Designed and developed HTML5 and WebGL-based projects for web and mobile platforms.
- Built custom products and frameworks using PlayCanvas, Three.js, and Phaser.
- Implemented backend systems using Node.js, Express, and MongoDB for user management and analytics.
- Integrated multiplayer functionality with Photon and Colyseus to support real-time interactions.
- Optimized performance for cross-browser and mobile compatibility.

ThreeDee — Principal Software Developer

Dec 2023 – Jun 2025 | Lahore, Pakistan (Remote)

- Led the development of an immersive 3D user experience using Three.js and WebGL.
- Architected and integrated backend services for data synchronization and content delivery.
- Collaborated with UI/UX teams to ensure smooth and engaging real-time 3D interactions.
- Mentored developers and contributed to code review, architecture planning, and deployment pipelines.

Virtual Days — Lead Software Developer

Dec 2022 – Dec 2023 | Stockholm, Sweden (Remote)

- Developed virtual event environments and interactive 3D platforms for online exhibitions.
- Built scalable Node.js backends and integrated APIs for real-time updates and event management.
- Improved system stability and performance across multiple concurrent users.
- Worked closely with international teams to deliver high-quality, production-ready experiences.

GenTeam Solutions — Senior Software Developer

Oct 2022 – Dec 2022 | Lahore, Pakistan

- Led a small team in building HTML5 multiplayer games with PlayCanvas and Photon.
- Enhanced backend APIs for matchmaking, leaderboards, and in-game communication.
- Improved loading speeds and asset management for web and mobile deployment.

GenTeam Solutions — Software Developer

Aug 2021 – Oct 2022 | Lahore, Pakistan

- Developed and maintained single-player and multiplayer HTML5 projects.
- Integrated APIs and databases for player profiles, scores, and achievements.
- Collaborated with designers to bring new gameplay features to production.

GenTeam Solutions — Junior Software Developer

May 2020 – Aug 2021 | Lahore, Pakistan

- Built and deployed multiplayer browser products, handling both client-side logic and server-side APIs.
- Learned and applied agile development workflows and version control (SVN, Git).
- Contributed to live operations by fixing bugs and adding new features post-launch.

Fauji Fertilizer Company — Intern (Frontend Developer)

Jul 2019 – Aug 2019 | Lahore, Pakistan

- Developed React.js frontend interfaces and integrated them with backend REST APIs.
- Assisted in implementing responsive UI and improving frontend performance.

Projects

Aspire (Freelance)

Developed a 3D window configurator integrated with Revit for architectural design. Built using PlayCanvas and Nuxt.js, with a Node.js backend and a Windows server to export and download windows in Revit format.

Car Configurator (Freelance)

Created an interactive car configurator using Three.js, allowing users to visualize and customize car models in real time directly within the browser.

Car Endless Game(Freelance)

Built a 3D endless car runner game using PlayCanvas, featuring responsive controls and optimized WebGL performance for smooth browser-based gameplay.

Custom Room Configurator (ThreeDee)

Developed a room configurator that lets users design spaces by placing furniture and decor items. Built with Three.js and connected to Firebase for real-time data storage and user configurations.

Virtual Days (Virtual Days)

Contributed to a virtual event platform for hosting interactive online conferences and exhibitions. Developed with PlayCanvas and SQL backend, enabling real-time 3D environments and global audience engagement.

Empire (GeniTeam)

Developed a team-based business simulation game for decision-making and strategic learning. Built with Cocos, featuring analytical dashboards powered by a React and Node.js backend with Firebase integration.

Advance (GeniTeam)

Created a business learning and strategy game focused on decision flow and performance analysis. Developed using Phaser, with a React + Node.js backend and Firebase for data management and progress tracking.

Musee (GeniTeam)

Developed Musee, a 3D virtual museum for showcasing NFTs and 3D models. Integrated MetaMask login and user-generated virtual showrooms, built with PlayCanvas and WebGL for interactive real-time rendering.

Skills

ThreeJs, PlayCanvas, , Cocos, Phaser, Firebase, Mongo, Javascript, WebGL, Multiplayer, Photon, Colyseus, Google Sheets, Rest API, Node, React, Express, SVN, Git
